Excellent source of detailed information

By sarayale

I am building a new house and wanted some detailed information on materials that would assist in all the choices I will be making. This book is so much better than the information you find that is intended for consumers, which is very lacking in details and substance. For example, you will find good information on the different types of construction for kitchen cabinets. This is of great assistance when having to choose a cabinet manufacturer. Instead of blindly comparing cabinets you can actually understand the quality you are getting. I would recommend this book to builders, homeowners who will build or renovate, and architects.

You are much better off spending on this book than most of the home magazines, with the exception of Fine Homebuilding which is the best I have found for real information.

Not as good as the JLC Field Guides

By Mr. D. Corcoran

This Best Practices Guide is a good reference book, but I think it pales in comparison to the two volume reference put out by the Journal of Light Construction, the JLC Field Guide to Residential Construction (Volumes 1 & 2). The JLC guides have a much more uniform and cohesive format and illustration/graphic style.

I have all three guides, and find myself using the JLC guides far more often in my residential remodel design practice.

Worth Every Penny

By M. Stormont

Steven Bliss has done a fabulous job culling material from many references which are found on nearly everyone's bookshelf! Bliss puts all the information into an easily understood and clearly illustrated medium. I particularly appreciate the product comparisons for various materials. This book is a must have for every residential architect!
